## Tune-in with Broadband\* Technology

AIRMAR's high-performance, broadband transducers are supplied as original equipment with many commercial fishing and survey echosounder systems from industry-leading manufacturers. When used as replacement transducers for already installed systems, they make the perfect, low-priced, high value, performance enhancement.

## The Ultrasonic Advantage

AIRMAR offers a full line of transducers for hydrographic survey and scientific applications including models suitable for Aquatic Habitat Assessment, Acoustic Fish Deterrents (AFDs) and Fish Aggregating Devices (FADs).

## Custom Configurations

AIRMAR specializes in custom active and passive transducer designs. We can design to your specifications or assist with development requirements. Customize your transducer with one of these AIRMAR housing models and the frequency you prefer.

### Broadband Technology

The outstanding qualities of these high-performance transducers make them the right choice for your marine applications! Many AIRMAR Broadband Transducers are already supplied as original equipment with many new echosounder systems. Or, when used as replacement transducers for already installed sounders, these transducers will make the perfect, low-cost/high-value, performance enhancement.

When used at discreet frequencies, the low-ringing and narrow-beam characteristics of these transducers help produce the most accurate single-beam surveys at any water depth. In addition, these transducers can be used with electronics that produce a chirp pulse.

### 200m Mini Altimeter Kit Smart™ Sensor

The 200m Mini Altimeter Kit is an ultra-compact altimeter kit designed for measuring height off the sea floor and underwater structures. Pressure rated for up to 1,000 meters, the 200m Mini Altimeter delivers excellent performance from a small, lightweight configuration optimized for use on UUVs and AUVs. The sensor is available in either 170 kHz or 200 kHz. With low power consumption of just 150 mA at 12 V, the 200m Mini Altimeter is perfect for power-limited vessels.

# Offshore Applications

## WX Ultrasonic WeatherStation® Instruments for Offshore Weather Monitoring

### Available Model: 200WX-IPX7

Weather impacts every aspect of operations on offshore platforms, ships, and in ports. Rapid changes in weather and sea conditions make monitoring of both meteorological and oceanographic parameters a critical part of ensuring safety, while also maintaining operational efficiency.

Reliable environmental monitoring is critical for various offshore needs. The numerous sensors contained in the compact size of the 200WX is an attractive feature for installations where space is limited, such as on buoys, USVs, and ASVs.

Having worked with many autonomous vehicle and buoy manufacturers, we have further developed the 200WX to be more robust—meeting the operational challenges of the harsh ocean environment.

The WeatherStation WX Series products offer a truly best-in-class solution at a better price point than any other weather monitoring system on the market today, enabling individuals and professionals the ability to make informed decisions based on real-time site-specific weather information.

### FEATURES

The 200WX-IPX7 WeatherStation instrument accurately measures real-time weather conditions, including:

- Dynamic True and Apparent wind speed and direction with no moving parts
- Air temperature and calculated wind chill
- Barometric pressure
- GPS: Position, speed over ground, course over ground
- Three-axis solid state compass with dynamic stabilization
- Three-axis rate gyro for rate-of-turn
- Best-in-class  $<1^\circ$  pitch and roll accuracy
- IPX7 water proof rating
- Current draw:  $<75\text{mA}$  (0.9W), LEN 2 at 12 VDC
- Available outputs: NMEA 0183 (RS422 or RS232) and NMEA 2000® (CAN bus)
